CSS

CSS → Cascading Style Sheet

when Gat ca in Jump:

1) inline → using style attribute
2) internal → using styles inside head
3) External → using <link id="stylesheet" href="path name">

* If a same property is used in three 2 using check
* 1) same high Priority

→ It takes the latest style of the element

> * inline > internal, external
> * If external internal then internal > external
> * If internal external then external > internal

When talk about further including coming Priority then

1) inline → using style attribute
2) id → #idname
3) class → .classname
4) Tag Selectors → e.g. - p, h1, div

> inline > id > class > Tag Selectors
> 1 2 3 4

Selectors:-

1) Element → p, h1, button, ul, li
2) id → #idname
3) class → .classname
4) group → p, h1, ul, li

* font → size
  family → fall back
  weight → 400 normal, 700 → bold
  Give height
  Style family *

* Color → website Color picker (in google chrome)
  1) Named Colors
  2) Rgb Colors, p, blue → 255 → 0-1 values
     → 0-1 values
     → 255 → 0-1 values
     → 255 → 0-1 values
     → 255
